

QA / Test Automation Engineer

Catch what should never reach production, before it does.

LOCATION
Remote (global)

TYPE
Full-time

About Tradoing

Tradoing is markets research that never makes up the numbers. Every figure traces to a real, checkable source; if a claim cannot be grounded, it is not shown. We are building the grounded research layer for analysts and investors, founder-led and early-stage.

The role

You build and run the tests that keep our products reliable: automated suites, regression checks, and release gates. You work closely with engineers to catch issues early, not after a customer reports them. You care about coverage that means something, not vanity metrics.

What you will do

- Design and maintain automated test suites across our products.
- Build regression checks and release gates that catch real issues.
- Work with engineers to fix root causes, not just symptoms.
- Track quality metrics and report on real risk, not vanity numbers.

What you bring

- 2+ years in QA or test automation for production software.
- Comfort writing test code, not just manual test plans.
- A sharp eye for edge cases and failure modes.
- Clear written communication in bug reports and reviews.

Nice to have

- Experience testing AI or LLM-backed features.
- Experience with CI/CD pipelines and release automation.
- A background in software engineering.

What we offer

- Fully remote. Work from anywhere in your timezone.
- Real ownership of your area from day one.
- A small, senior team and direct founder access.
- Async-first, low-meeting culture.

How to apply

Apply at <https://tradoing.com/careers/qa-engineer>. We post shortlist updates on LinkedIn, follow Tradoing so you catch yours: <https://www.linkedin.com/company/tradoing/>. Want to move faster? DM us on LinkedIn, mention the role, and introduce yourself.
